

Project Monitoring

A monitoring report for each of the 4 water agencies will estimate gallons per minute lost at the time all leaks were repaired. Agency staff will extrapolate annual water savings from the repairs. Agency staff will continue with periodic spot leak surveys and will provide quarterly reports to SBC to track every water leak detected and repaired within the project area. The monitoring report will include the date fixed, size of leak, estimated leakage rate in gallons per minute and the water agency's cost to fix each leak.

CEQA Compliance

If CEQA compliance is required for the leak detection activities described in this document, it is expected that a Negative Declaration will satisfy the compliance. No wetlands are expected to be encountered within any of the water agency project locations. All construction will take place within existing water line rights of way. If required, the Water Agencies' Environmental Specialists will process the required CEQA compliance documents. All construction activity will follow Best Management Practices.
